TERMS: Cash with order. C. O. D. orders require one-third cash in advance.

Small orders will be sent parcel post.

Large orders sent by express collect.

PLANTING HINTS

Plant strawberries 15 to 18 inches apart in row for June bearing types and 12 to 15 inches for ever-bearers, with rows 3 or 3½ feet apart. Plant in well drained and well prepared soil. Set crown of plant about even with soil. Do not cover crown with soil. Mulch strawberries about middle of November with 2 or 3 inches of straw.

Red stele root rot of strawberries makes it hard to get a good crop on the old standard kinds. Therefore we suggest planting the resistant varieties, Temple, Sparkle, Fairland and Vermillion.

Plant raspberries 2 feet apart in the row with rows wide enough to suit your method of cultivation. Mulch of straw or other coarse material is good after plants are established. Support is not necessary if you prune every year.

Grapes 6 to 8 feet apart in row.

Dwarf apples 6 to 10 feet apart.

Standard apples 20 to 40 feet apart.

Peach 15 to 20 feet apart.

Plant peaches and cherries in well drained soil. Add humus such as peat or rotted manure to soil for planting fruit trees. Dig hole large enough to accommodate all roots. Do not plant too deep. On standard fruit trees put the graft an inch or so below ground level, on dwarf trees at the ground level.

We especially recommend the following new varieties:

Strawberries, Red Rich, Vermillion, Paymaster.

Raspberries, September, Bristol.

Rhubarb, Valentine.

Cherry, Brassington, Black Russian.

Peach, Red Haven, Red Leaf, Fair Haven.

STRAWBERRY PLANTS

We specialize in the newer disease resistant varieties. It pays to plant red stele resistant kinds, but if conditions are right, good results are obtained from non-resistant varieties.

Virus free plants grow and produce much better especially in varieties like Sparkle.

Plants marked ★ are red stele resistant.

Plants marked * are virus free.

✓ Vermilion * ★ Newest of the red stele resistant types. Yield is extremely heavy, 100 qts. from 50 plants in our own test 1953. Very high quality.

✓ Sparkle * ★ Virus free Sparkle should not be compared with standard Sparkle as the yield is much heavier. Quality is the same sparkling red and sweet. Recommended by Ohio Experiment Station at Wooster. Midseason, good freezer.

✓ TEMPLE: ★ New early excellent quality fruit, very resistant to red stele root rot. Good plant maker. Recommended much more highly than Premier and is a sure cropper.

✓ FAIRLAND: ★ New red stele resistant. Very good early variety. This is a cross from Fairfax and has its good quality.

✓ ROBINSON: * New giant size. Early to midseason, bright red, heavy bearer.

✓ ARMORE: * Another new heavy yielding variety. Out produced 60 others in actual growing tests. Very good freezer in Ohio tests.

✓ PREMIER: * The standard early bearing strawberry doing well on any well drained soil. Good quality.

✓ SENATOR DUNLAP: * Old variety, medium fruit, sweet and productive.

✓ PAYMASTER (Midseason) ★ Sparkling, radiant red. A real beauty of a berry . . . beauty that is more than skin deep because Paymaster is red clear through. It's one of the new varieties that rates high in university freezing tests and at the same time boasts a firmness that makes it ideal for handling. The berries are large and it's a high yielder. Resistant to red stele.

✓ PLENTIFUL (Late midseason) ★ Here's the strawberry that earned its name by performance. Very highly productive in plants and yield. The berries are exceptionally large and a brilliant red. An excellent choice for heavy production when the demand is high after earlier varieties are through. Resistant to red stele.
